Full Stack Software Developer

Experienced in full-stack web development and software engineering with a background in management, public speaking, entrepreneurship, and small business operations. Passion for front-end and UI/UX. Known among coworkers and teammates as kind, intelligent, dedicated, loyal and hard working.

Technical Skills

Languages: JavaScript, HTML, CSS3, TypeScript, C#, Python

Frameworks & Libraries: React.js, Node.js, Express.js, Next.js, Tailwind, MUI, Bootstrap, NextUI, JQuery, Moment.js, Handlebars.js, Socket.io, Anime.js, RabbitMQ, JWT, CurryAPI, REST APIs, grapes.js

Databases: SQL, MySQL, Sequelize, MongoDb, GraphQL

Select Achievements

- Significantly decreased the deployment time of departmental software as a junior developer for Clayton County government.
- Graduated top of the class from GA Tech's Full-Stack Flex Bootcamp and was hired as a paid TA.
- Was promoted to section manager in the first 3 months of working for GA Furniture.
- Achieved 5-star customer service rating for my personal retail business making lasting relationships.

Work Experience

Account Executive – Konnektive/ Checkout Champ CRM
June 2024 – Current
- Primary responsibilities are to train new and existing clients and client's dev teams in how to utilize our CRM and funnel builder to grow their online ecommerce stores. We are responsible for assisting the clients in integrating their existing Shopify, Woo Commerce and custom-built websites into our system using plugins or API.
- In our funnel builder, built in react, we are also responsible for altering, debugging, and customizing funnels using HTML, CSS, and custom JavaScript for our clients.

Freelance Web Developer
June 2022 – Current
- Freelance web development work for ProFinish Solutions ATL and other small companies.
- Next.js, Typescript, and tailwind CSS are currently being used for ProFinish Solutions ATL.
- Also participated in scoping projects, troubleshooting, Quality Assurance and assisted in MERN stack development for a local start up.
- Continued my training in 2022 by learning the basics TypeScript, C#, Python, and .NET with a Senior Developer's guidance and instruction while developing a MongoDB back-end for a local production studio.

Full-Stack Web Developer/ Engineer – Clayton County Government
January 2023 – October 2023
- Responsible for implementing and even designing new features while collaborating with BA (Business Analyst), QA (Quality Assurance) teams and other developers on an enterprise level application while maintaining proper version control, best practices and test cases for each task assigned on Jira. Utilized agile methodology.
- Learned and implemented effective debugging and troubleshooting strategies to find and fix very difficult bugs in the application.

- Architecture of the project: We mainly utilized React and JavaScript along with socket.io for our front-end interfaces. We used a proxy service to clean up our routes to and from the back-end. We used Typescript and C# services for our back-end logic, RMQ (Rabbit Messaging Queuing) to send messages between services, SQL as our database and SSRS for building reports.
- Other technologies utilized in the app's production: Jenkins, Axios, REST API, docker.io, react-cache-buster, JWT, swagger.io, and es-lint.

Part-Time TA (Teaching Assistant) – GA Tech/ EdX Bootcamps
October 2022 – January 2023
- Provided technical guidance and support to students in mastering a diverse range of technologies, fostering an environment conducive to learning, curiosity, and growth.
- Assisted in the smooth operation of digital classrooms on Zoom, demonstrating strong teamwork and communication skills receiving thank you commendations from students.

Sales Representative & Section Manager – GA Furniture Mart
March 2021 – November 2021
- Generated over $800,000 in sales revenue in a 7-month period, utilizing effective sales strategies and exceptional customer service.
- Responsible for taking care of customer needs, guiding them through the sales process, closing the sale, providing follow-ups, gaining good reviews for the company, and managing my fellow sales team to keep up with their sections in the store.

President & Co-Owner – Mattress Made Easy
April 2017 – March 2020
- Directed all aspects of business operations, including marketing, sales, finance, logistics, and personnel management, resulting in a 5-star customer service rating and impressive sales performance at 80% close rate at a 55% average margin.
- Played a key role in website development using WordPress and gained valuable experience in financial management with QuickBooks.

Education & Certifications

Georgia Institute of Technology | Atlanta, GA – 2021-2022 Graduated top of the class – *Full Stack Web Development Certificate 2022.*
Appalachian State University | Boone, NC – Attended College for Computer Science 2007-2009

Personal Projects

Re-Engage – Repo: github.com/RMcwey/Re-engage | Deployed: radiant-inlet-31790.herokuapp.com/
- MERN (MongoDB, Express.js, React.js, Node.js) stack app using JWT for authentication.
- The application allows users to upload a desired text, or use other text from other users, then creates a flashcard style game that finds relevant parts of speech and removes random useful words. This requires the user to select the right word to move forward helping the user engage with their selected text for better memorization and comprehension. The application saves the user's progress and is displayed in their account page. This application also features a built-in, fully functional Bible app using bible-go API and uses our server as a proxy to bypass CORS policy.

Profile REACTion – Repo: github.com/RMcwey/Profile-REACTion#technology-used | Deployed: rmcwey.github.io/Profile-REACTion/
- My portfolio/profile was built using React, Node.js, JavaScript, collapsible package, react-router, CSS and photoshop.
- The application is four seasons themed and intentionally built without bootstrap or other CSS frameworks to challenge myself. It is fully responsive, working even on unique screens. All pictures were edited on Photopea. The application also has a fully functional contact section using Email.js.

The Shelf – Repo: github.com/RMcwey/Good-Neighbor | Deployed: pure-cliffs-09110.herokuapp.com/
- A CMS-style full stack application following the MVC paradigm in structure that features client logins, accounts, and login verification for user data protection. Utilizes JavaScript, Node.js, Express.js, jQuery, Bootstrap, Handlebars.js, Sequelize as the ORM, Anime.js, and is deployed on Heroku.
